
EOTextAssociation

Inherits From:	EOAssociation : EODelayedObserver : NSObject
Conforms To:	NSCoding (EOAssociation) EOObserving (EODelayedObserver) NSObject (NSObject)
Declared In:	EOInterface/EOTextAssociation.h

Class at a Glance

Purpose

An EOTextAssociation binds an NSText object to a string or NSData attribute, and can handle plain text, RTF, or RTFD (RTF with attachments).

Usable With

NSText, NSTextView, NSCStringEncoding

Aspects

value	A text attribute of the selected object.
editable	A boolean attribute of the selected object, which determines whether the NSText object is editable.

Object Keys Taken

delegate	An EOTextAssociation accepts delegate messages related to the editing and validation of text; see the NSText, NSTextView, and NSCStringEncoding class specifications for more information.
----------	--

Class Description

An EOTextAssociation displays a plain or rich text attribute in an NSText object. It determines the kind of text received from an object by examining the beginning for signature codes specific to RTF and RTFD. When writing text back to the object, the association examines the configuration of the NSText object to determine the type to use:

Multiple Fonts

NO
YES
YES

Allows Graphics

NO
NO
YES

Type Written to Object

NSString text
NSData containing RTF
NSData containing RTFD
